Patina® Cases type A construction

INTRODUCTION

The Patina® range of plastic enclosures has been launched in response to an increased demand for aesthetically pleasing and technically competent electronic packaging solutions. This range utilises the latest tool finishing techniques and as such gives a high quality, durable textured surface which ensures that your product - looks good for longer!

The Patina® products also offer the very latest in material durability, using a high quality, flame retardant (UL94-V0) ABS.

APPLICATIONS

The Patina® range of attractive and durable plastic enclosures is available in 12 sizes. They offer a significant choice to the user, both in terms of sizes, as well as 2 different assembly methods.

These enclosures are ideally suited to office or industrial applications, for computer peripherals, or test instrumentation.

Features

- ? UL 94-V0 ABS
- ? RAL 7035 light grey
- ? Screw or clip together design (Types A & B)
- ? Anodised aluminium front and rear panels
- ? Scratch resistant - chemical etch texture finish
- ? Choice of 12 sizes
- ? Moulded - in PCB mounting features
- ? EMC options - Si/Ag inner coating
- ? Vertical or horizontal board mounting

TYPE A CONSTRUCTION

Type A cases consist of two heights of moulding which give three case sizes when assembled (See drawing Type A). The four securing screws pass through the base and are then retained by brass inserts in the top moulding.

Bosses in the mouldings provide self tapping screw fixing points for circuit boards and chassis plates.

Single eurocards (100mm x 160mm) can be mounted easily into type A cases.

Keyhole knockouts for wall mounting are provided and vertical moulded guides for circuit board or panel mounting are integral in the top and base.
